PROJECTS

Movie App
- Fullstack movie application made with react, nodejs, mongodb and expressjs.
- Allows users to find information about any movie from one place and let users to add and or view comments.
- Carousels were used for responsive design.
- They can add movies to their watchlist and set different status such as "currently watching" or "watched" etc.

Weather App
- Front-end react application made with tailwindcss.
- It uses geolocation to show current weather information when loaded.
- Users can search any location and will see updated weather data.

EXPERIENCE

Customer service
2019 - 2020

Co-op Food
- Work as part of the stores team to help customers check availability on items.
- Process customer orders and restock items when needed.
- Communicate clearly to resolve any queries or complains about our products.
- While gaining retail experience in Co-op i learned to work under pressure and multitask.
